Excluding \$36 million of favorable development in the first six months of 2007, our loss ratio before the LPT would have been 66.5% and our combined ratio would have been 106.4%. We target a combined ratio of 100. The total combined ratio includes three items causing upward pressure: (1) one shock loss requiring additional reserves that may run in excess of \$3.5 million; (2) one-time conversion costs; and (3) decreasing earned premium.
 Total deferred gain amortization and LPT reserve adjustment of \$43.8 million in 2005, \$19.4 million in 2006, \$4.6 million in the first and \$4.6 million in the second more present.

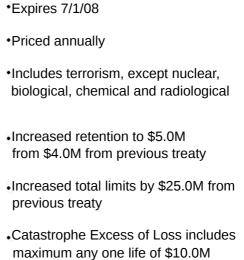

quarters of 2007.

(3) Our higher expense ratio is largely a function of falling California rates.
